1. Introduction

In the fabric of local governance, Municipal Service Welfare Development (MSWD) stands as a cornerstone dedicated to the holistic betterment of communities. Operating within the framework of municipal administrations, MSWD initiatives encapsulate a spectrum of programs and services strategically designed to uplift the quality of life for residents across diverse socio-economic strata. At the heart of MSWD's mandate lies a commitment to addressing the intricate web of challenges faced by communities, ranging from socio-economic disparities to vulnerabilities stemming from age, disability, or adverse circumstances. Through a combination of proactive planning, community engagement, and targeted interventions, MSWD endeavors to create an environment where every individual has the opportunity to thrive.

The Municipal Social Welfare and Development (MSWD) is a vital governmental agency dedicated to promoting social welfare and community development in the Mabini region. Committed to enhancing the well-being of residents, MSWD implements a diverse array of programs and services. From addressing economic challenges through financial aid and livelihood support to safeguarding the rights of children and empowering marginalized groups, MSWD plays a crucial role in fostering a more inclusive and resilient community. Through its initiatives, the agency seeks to create positive social change, provide assistance during crises, and contribute to the overall progress and welfare of the Mabini community.

Embarking on this transformative journey signifies a commitment to modernizing the delivery of programs and services within the Municipal Social Welfare Development (MSWD). Our aspiration is to leverage digital platforms and technology to revolutionize the way assistance is provided.

In this section, purpose, goals, and scope of the proposed system shall be explained.

1.1. Purpose

The main purpose of creating the "LGU Mabini - MSWD Programs and Services Monitoring System" would likely be to enhance the efficiency, transparency, and effectiveness of the programs and services provided by the Local Government Unit (LGU) in Mabini, particularly those related to the Municipal Social Welfare and Development (MSWD) department.

1.2. Scope

The goal of the proposed system is to provide the following features required by the target users:

- **Dashboard:** Graphical interface that aggregates and visualizes data from various sources to monitor the health, performance, or efficiency of systems.
- **Constituent Management:** System should be able to store the personal informations of every constituent who will avail the programs or services in the said municipality.
- **Household Manager:** For storing the address and family position and counts in every household.
- **Sector Management:** For storing the range of activities.
- **Programs Management:** For storing of beneficiaries with the program and services availed.
- **Services Management:** Lists of Services offered and requested.
- **VAWC:** Lists of victims and abuser.
- **Reports**
 - **Household List**
 - **Solo Parent List**
 - **PWD List**
 - **Senior Citizens List**
 - **Programs and Beneficiaries List**
 - **Services and who availed List**
 - **VAWC Cases**

1.3. Definition, Acronyms, and Abbreviations

Terms	Definition
MSWD	Municipal Social Welfare and Development refers to the government department or agency responsible for addressing social welfare and development issues at the municipal or local government level.
DSWD	Department of Social Welfare and Development is the executive department of the Philippine Government responsible for the protection of the social welfare of rights of Filipinos and to promote the social development.
VAWC	VIOLENCE AGAINST WOMEN AND CHILDREN refers to a range of violent acts committed against women and children, including physical, sexual, psychological, and economic violence.
PWD	Person With Disability is an individual who has a physical, sensory, cognitive, or mental impairment that substantially limits one or more major life activities.
LGU	Local Government Unit is an administrative or political division within a country that is responsible for governing and providing public services at the local or regional level.
HTML	Hypertext Markup Language is a markup language for web application.
CSS	Cascading Style Sheet Is a language use to design an HTML document.
MYSQL	MYSQL is an Oracle – backed open-source relational database management system (RDBMS) based on Structured Query Language (SQL).
PHP	Stands for "PHP: Hypertext Preprocessor," a recursive acronym. PHP is a scripting language web developers use to create dynamic websites.
Prototype	This is an initial creation of the product that shows the basics of what a product looks like, what a product do and how it operates.

2. Overall Description

LGU Mabini - MSWD Programs and Services Monitoring System is designed to be a comprehensive tool for the Municipal Social Welfare and Development (MSWD) department within the local government unit (LGU) of Mabini. The system aims to enhance the efficiency, transparency, and effectiveness of social welfare and development programs and services provided to the community.

In this section, overall description of LGU Mabini - MSWD Programs and Services Monitoring System shall be outlined from system's essential features, functionality, constraints, assumptions and dependencies. All data gathered as part of software requirement specification shall be the basis for the concept of LGU Mabini - MSWD Programs and Services Monitoring System.

2.1. Product Perspective

Monitoring, Supervision, and Workforce Development (MSWD) programs and services monitoring systems are essential tools for governments and organizations to ensure the effective implementation of their initiatives. These systems provide a structured approach to assess, evaluate, and improve the quality and impact of various programs and services.

MSWD programs and services monitoring systems play a crucial role in ensuring the success, accountability, and effectiveness of various initiatives. They are a valuable tool for governments, nonprofits, and other organizations to deliver services and programs that genuinely make a positive impact on the communities they serve.

The system will be using different pioneering technologies in the development and fulfillment of the product's features. For back-end or server-side, the system will be using Laravel, and HTML, CSS, Bootstrap, JavaScript for the front-end or client-side. It will also impose MVC Architecture as its coding pattern while having MYSQL as the database server and Apache as its web server.

The main end-users of the system are identified as the **Admin**, its **staffs**.

2.2. Product Functions

This subsection of the SRS provides the summary of the major functions that LGU Mabini - MSWD Programs and Services Monitoring System will perform.

Hence, from the viewpoint of the end-users, LGU Mabini - MSWD Programs and Services Monitoring System offers various functionalities:

- ✓ **Dashboard:** Graphical interface that aggregates and visualizes data from various sources to monitor the health, performance, or efficiency of systems.
- ✓ **Constituent Management:** System should be able to store the personal informations of every constituent who will avail the programs or services in the said municipality.
- ✓ **Household Manager:** For storing the address and family position and counts in every household.
- ✓ **Sector Management:** For storing the range of activities.
- ✓ **Programs Management:** For storing of beneficiaries with the program and services availed.
- ✓ **Services Management:** Lists of Services offered and requested.
- ✓ **VAWC:** Lists of victims and abuser.
- ✓ **Reports**
 - ☐ **Household List**
 - ☐ **Solo Parent List**
 - ☐ **PWD List**
 - ☐ **Senior Citizens List**
 - ☐ **Programs and Beneficiaries List**
 - ☐ **Services and who availed List**
 - ☐ **VAWC**

2.3. User Characteristics

The potential users are identified, classified, and described as follows:

- **Administrator Access:**
 - Dashboard
 - Constituent Management
 - Household Manager
 - Programs Management
 - Sector Management
 - Services Management
 - VAWC
 - Reports
- **Staff 1 Access:**
 - Constituent Registration
 - Service Management
 - Reports
- **Staff 2 Access:**
 - Programs Management
 - VAWC
 - Reports

2.4. Constraints

A constraint is any limitation or risk that must be accounted for over the duration of the project life cycle. Solution will be impossible if any of these limitations are violated.

2.4.1. Hard Constraints

Hard constraints are constraints that are absolutely non-negotiable. A hard constraint

is a constraint that must be satisfied by any feasible solution to the model.

- **Constituent Management.** Legal requirements for privacy and data protection, accessibility standards, and mandatory reporting deadlines.
- **Programs Management.** Budget limits, regulatory compliance requirements, fixed deadlines for certain deliverables, and resources availability.

2.4.2. Soft Constraints

Soft constraints, on the other hand, are constraints that could be negotiated once in a while.

- **Constituents Management.** Preferences for communication channels, engagement levels desired by constituents, and targeted satisfactory levels.

2.5. Assumptions and Dependencies

Assumption is defined statement that is generally considered to be true without any proof or evidence while *dependency* simply means that one task or activity is reliant on another one. The following are assumptions and dependencies made in order to maximize system utilization:

- **User Hardware and Operating System Compatibility.** It assumes that users have computers with hardware specifications and operating systems are compatible with the browser version.
- **Security Measures.** Users will have some basic security measure in place, such as firewalls and antivirus software, to complement the browser's built-in security features.
- **User Technical Savvy.** The design and usability of the browser often assumes a certain level of technical proficiency among users, enabling them to navigate, customize settings, and use advanced features effectively.
- **Software Dependencies.** The application server and database system may depend on other software components or libraries that need to be present or installed on the desktop system.
- **Backup and Recovery Solutions.** The integrity and availability of data depend on external backup and recovery solutions that users must implement to protect against data loss or corruption.

3. Specific Requirements

This section of the SRS identifies the system’s hardware and software interfaces; the user interface’s fundamental prototypes; the functional and performance requirements; design constraints; and software system attributes.

3.1. External Interfaces Requirements

External Interfaces Requirements specify hardware and software with which a system or component must interface. This section provides information to ensure that the system will communicate properly with external components.

3.1.1. Hardware Interfaces

A computer server is necessary to put the software’s server-client architecture into practice. This contains the user’s accessible websites and database. Below are the minimal hardware specifications:

Server:

- Processor: 3.00GHz
- RAM: 8GB DDR4
- Main Drive: 500 SSD

3.1.2. Software Interfaces

Server:

- Operating System: Windows 11
- Database Server: MySQL
- Web Server: Apache 2.4.37
- Programming Language: PHP, Laravel
- Front-end Design: Tailwind, JQUERY
- Use Case: Draw.io

3.2.2. Prototype

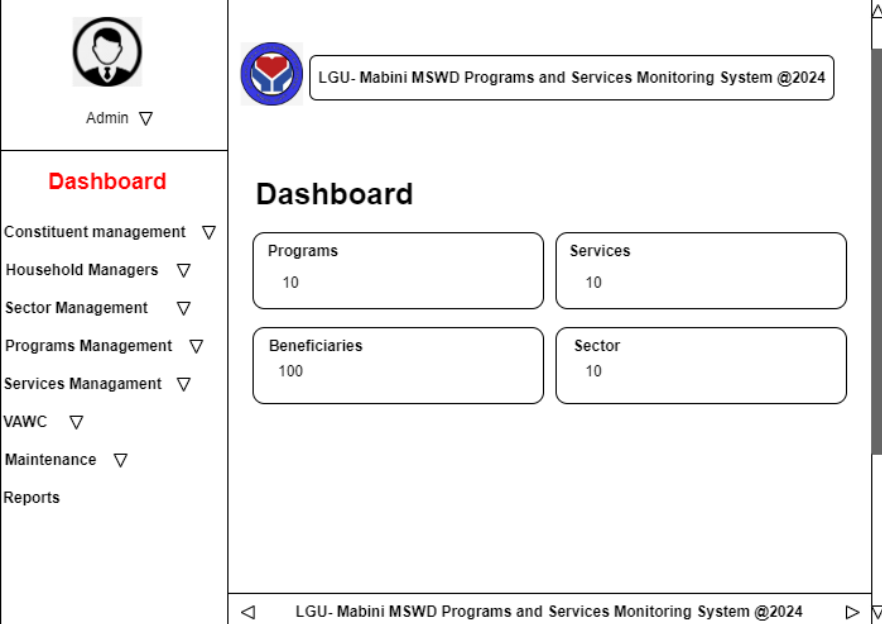

3.2.2.1 Log-In Prototype

The Log-In Prototype is a rectangular window with a light gray background. At the top center is a circular icon of a person's head and shoulders. Below the icon, the text "Welcome" is centered. Underneath "Welcome" is the word "Administrator" in bold. Below "Administrator" is the text "Admin | Staff1 | Staff2". There are three input fields stacked vertically: the first is labeled "User", the second is labeled "Password", and the third is a dark gray button labeled "Login".

Figure 11.0 Log-In Prototype

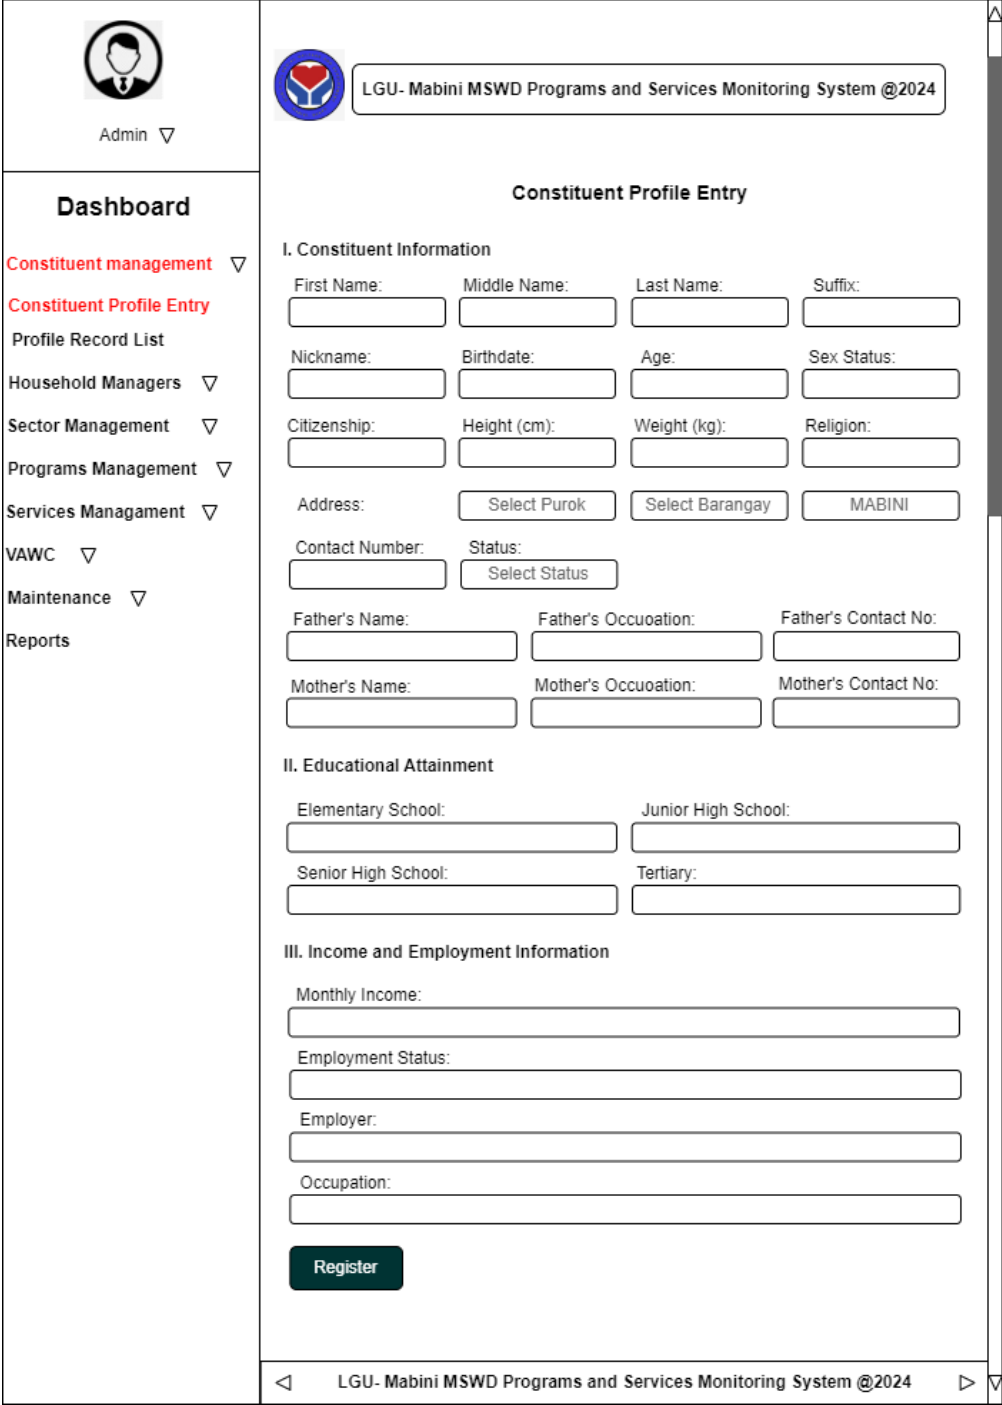

4.2.2.2 Admin Dashboard Prototype

The Admin Dashboard Prototype is a complex interface. On the left is a sidebar with a user profile icon and the name "Admin" with a dropdown arrow. Below this is a list of menu items: "Dashboard" (highlighted in red), "Constituent management" (with a dropdown arrow), "Household Managers" (with a dropdown arrow), "Sector Management" (with a dropdown arrow), "Programs Management" (with a dropdown arrow), "Services Management" (with a dropdown arrow), "VAWC" (with a dropdown arrow), "Maintenance" (with a dropdown arrow), and "Reports". The main content area has a header with a logo and the text "LGU- Mabini MSWD Programs and Services Monitoring System @2024". Below the header is the word "Dashboard" in bold. There are four data cards arranged in a 2x2 grid: "Programs" with the value "10", "Services" with the value "10", "Beneficiaries" with the value "100", and "Sector" with the value "10". At the bottom of the main content area is a footer with the text "LGU- Mabini MSWD Programs and Services Monitoring System @2024" and navigation arrows.

Figure 12.0 Admin Dashboard Prototype

3.2.2.3 Constituent Profile Entry Prototype

The prototype shows a web interface for entering constituent profiles. It features a sidebar with navigation links, a top header with a logo and system name, and a main content area with three sections: I. Constituent Information, II. Educational Attainment, and III. Income and Employment Information. Each section contains various input fields for personal and contact details. A 'Register' button is located at the bottom of the form.

3.2.2.6 Create Family Prototype

The screenshot displays the 'Create Family' form within the LGU-Mabini MSWD Programs and Services Monitoring System @2024. The interface includes a top navigation bar with a user profile icon labeled 'Admin' and a system logo. A left sidebar menu lists various management options: 'Dashboard', 'Constituent management', 'Household Managers', 'Create Household', 'Create Family' (highlighted in red), 'Household List', 'Sector Management', 'Programs Management', 'Services Management', 'VAWC', 'Maintenance', and 'Reports'. The main content area features the 'Create Family' form with the following fields: 'Select Household' (a dropdown menu), 'Family Head:' (a text input), 'Family Name:' (a text input), and 'Family Members:' (four stacked text inputs). A blue 'Create Family' button is positioned at the bottom of the form. The footer of the page contains the system name and version: 'LGU- Mabini MSWD Programs and Services Monitoring System @2024'.

3.3. Performance Requirements

Performance requirements define how well the system performs certain functions to meet its intended goals. It helps to ensure that the system function efficiently and effectively, meeting user expectations and business needs.

3.3.1. Execution Time

In general, the execution time of a system or a specific process within a system refers to the amount of time it takes for the system or process to complete its operations. This can be influenced by a wide range of factors including, but not limited to, system hardware, software efficiency, current system load, and the specific tasks being executed.

3.3.2. Efficiency

The project enhances the ability of local governments to monitor and improve the delivery of services, respond to the needs of their communities more effectively, and make data-driven decisions that can lead to improved welfare outcomes. However, achieving high efficiency requires careful planning, continuous improvement, and the commitment of sufficient resources.

3.4. Design Constraints

This should specify design constraints that can be imposed by other standards, hardware limitations, etc.

3.4.1. Software Language

The system is developed using a variety of languages. It uses PHP (Hypertext Preprocessor) to manage dynamic content and database development.

3.4.2. Graphical-User Interface

An amalgam of CSS, HTML, JavaScript, and a few frameworks and APIs make up the graphical user interface. The system also employed bootstrap framework UI designing.

3.5. Software System Attributes

LGU Mabini- MSWD Programs and Services Monitoring System, which aims to track and improve the delivery of local government services focused on welfare and development, several software system attributes would be crucial.

3.5.1. Reliability

LGU Mabini- MSWD Programs and Services Monitoring System *is reliable*. Ensures that the data collected and reported are correct and reflective of actual services provided and minimizes downtime to ensure continuous operation and access to information.

3.5.2. Availability

LGU Mabini- MSWD Programs and Services Monitoring System *is available*. Ensuring that municipal services can be delivered without interruption, and that welfare and development initiative are effectively monitored and managed.

3.5.3. Security

LGU Mabini- MSWD Programs and Services Monitoring System protects sensitive information, especially individual welfare records, through encryption and secure access controls.

3.5.4. Maintainability

LGU Mabini- MSWD Programs and Services Monitoring System continuously monitor system performance, health, and security to identify and address issues before they impact availability. Apply software updates, patches, and security fixes regularly to maintain system integrity and protect against vulnerabilities.

3.5.5. Portability

LGU Mabini- MSWD Programs and Services Monitoring System *is portable*. Runs on various hardware and operating systems to accommodate different technology infrastructures in municipal offices.
